ULTRA V WITH ERADICATOR FEATURES AND BENEFITS

Easy To Service And Maintain - Pump is mounted above liquid being pumped with only the suction line down in liquid.

Dual Bearing Protection - An atmospheric barrier along with two lip seals provide additional protection of the pump bearings. This unique design also allows for quick and easy external monitoring of the bearing cavity.

Inspection Cover - Patented, lightweight inspection cover for easy access to the impeller without removing the entire backcover plate or piping.

Self-Cleaning Wearplate - Incorporating a number of notches and grooves, as well as a revolutionary tooth (Tooth used on T3 - T10 models), that helps break up stringy materials and pass them through the pump without impacting performance or interrupting service. This greatly reduces troublesome clogging and expensive downtime.

Up To 3" Diameter Spherical Solids Handling (2.50" dia solids on V3A and V3C models).

Removable Rotating Assembly - The entire rotating assembly can be removed without disturbing the pump volute or piping allowing the rotating assembly to be easily repaired or quickly replaced with a new ready to drop in assembly.

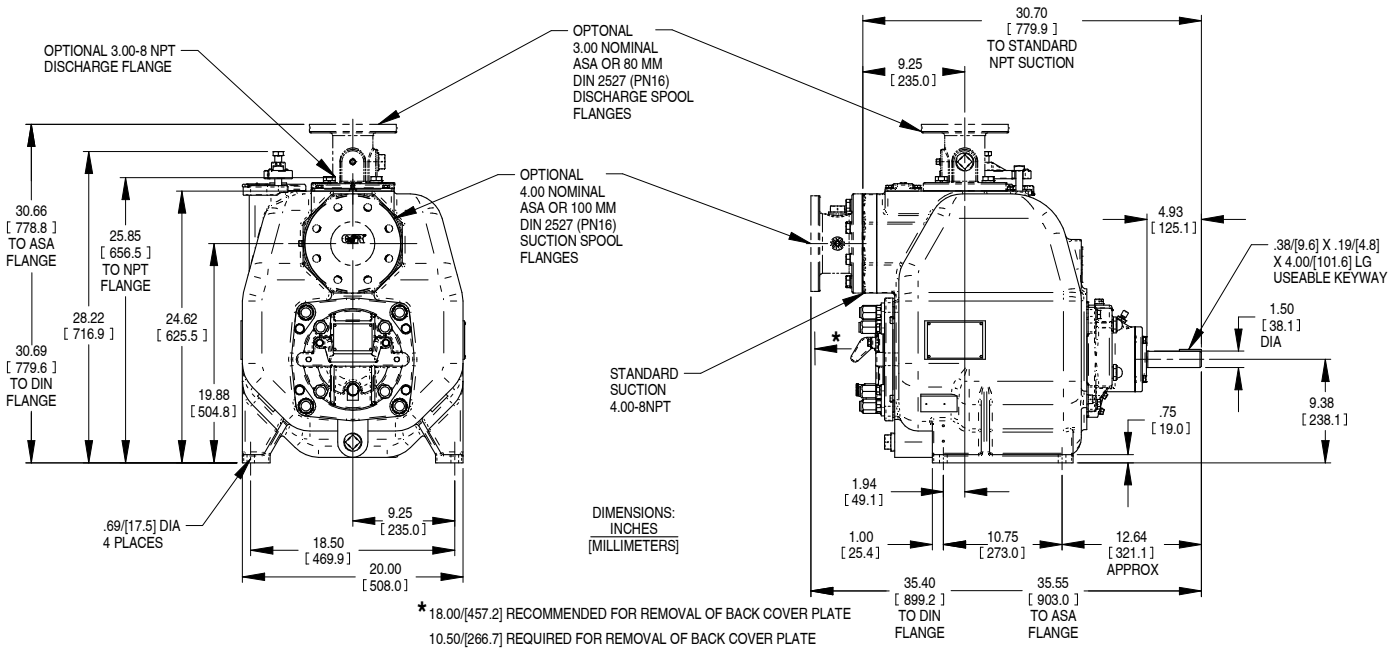

Upgradeable - The patented UltraMate® can be paired with the Ultra V Series pump when system requirements exceed the Ultra V's exceptional performance range. By adding the UltraMate unit directly to the Ultra V through an innovative transition chamber, maximum pressure is increased up to three times the pressure of traditional solids-handling, self-priming, single stage pumps.

Externally removeable suction check valve - A positive sealing, externally removeable suction check valve is standard on Ultra V Series® models. This eliminates the need to disconnect any piping for inspection or replacement. The check valve has a blowout center that limits excessive volute pressure, protecting the pump.
